2. The unit should be able to evacuate the smoke for laparoscopic procedures and should help maintain internal pressure (pneumoperitoneum).
3. The unit should be having up and down push button or knob/touch screen unit display control for modification of parameters.
4. The Smoke evacuator should simultaneously auto-activate with all surgical energy devices including Ultrasonic Energy.
5. The smoke evacuator filter should be 4 stage ULPA grade to capture particulate & microorganisms from 0.1 to 0.2 micron at an efficiency of 99.999% along with absorption of odor & toxic gases.
6. Filter life should be more than 25 hrs with filter life indicator, along with the display in advance for filter change required
7. The smoke evacuator unit should have inbuilt Suction system & should have 5 different suction speed for lap & open surgeries
8. Unit should be supplied with main filter with One/two connection of suction tube size 10mm or 22mm which should be able to connect individually.
9. Unit should be provided with the accessories like,
 - a) Disposable Electrode Handle with attached clip-on Applicator with tubing (-100pc) or appropriate connector
 - b) Plastic suction tube, hose connector and air hose of various sizes and
 - c) RFID ULPA & activated carbon / Charcoal Filter.
10. The unit should have turbo / high speed manual mode for open surgery and for anesthesia intubation and extubating.
11. The unit should be silent / noise-less while in use.
12. The smoke evacuation system should comply with IEC60601.1 electrical specification & should have class I protection against electric shock (UL60601-1, Clause 5.1)
13. System should comply with electromagnetic emission CISPR11.

Technical Specifications:

1. Appliances air flow should be min 5 L/min to 12 L/min for lap to maintain pneumoperitoneum, and for Open procedures 20 L/min to 1250 L/min.
2. Activation- automatic activation with monopolar, bipolar, advance bipolar & ultrasonic energy generator, Automatic activation device & manual activation from

the front panel.

3. On a lesser flow rate, the system should maintain the pneumoperitoneum pressure with availability of five different flow rate option to adjust the flow rate/ the systems should have five safety alarm if the Pneumoperitoneum is not maintained
4. The unit should be 3 and above suction speed option for different types Surgeries with ability to change the suction speed setting during surgery.
5. System should be compatible with all ESU, all Advance RF energy devices and Ultrasonic Energy Generators.
6. System should be autoactivated with all ESU, all Advance RF energy devices and Ultrasonic Energy Generators.
7. The unit should have footswitch and Inter Link Connector to switch the unit manually and Auto on and off as desired.
8. The system should have open & laparoscopic mode
9. Operating environment temperature 5 to 55 degree Celsius
10. Power requirement- 220/240 VAC
11. Frequency auto sensed: 50/60Hz
12. Duty cycle: Continuous
13. Vacuum pressure: 4.95 PSI

Unit should be European CE & US FDA Certified.

The unit should be of International standards for Transportation, Storage and for Operation

Accessories & Disposables
